

## ***There is a better way.***

Designed for use with our Columbia line of hoists, our Hammerhead Trolleys are available in capacities of one, three, and five tons - ideal for a wide range of material handling applications. Since the hoist is stationary, the need for complicated and expensive electrical festooning systems is eliminated.

When used with a base mounted hoist, the wire rope arrangement through the trolley doubles the capacity of the hoist. Not only does this allow for more efficient movement of materials, but the low weight of the trolley increases the net load that can be lifted on any given size of beam.

The low-profile design of the trolley achieves an increase hook height, allowing for greater accessibility in tight spaces. Low friction bearings are used throughout to ensure efficient operation and movement. A variety of chain and power drive options are available as are custom trolleys with higher capacities.

**CAUTION:** The final determination as to the suitability of this product for any purpose is solely that of the user. Columbia products are not to be used to lift people or to lift anything over people.
